Microsoft Silverlight installation guide for Infobridge

To be able to use Infobridge you need to install a plugin called Microsoft Silverlight. Microsoft Silverlight is an application framework for writing and running rich Internet applications. If you do not have this plugin installed you will automatically be guided to install it on your computer when visiting Infobridge the first time.
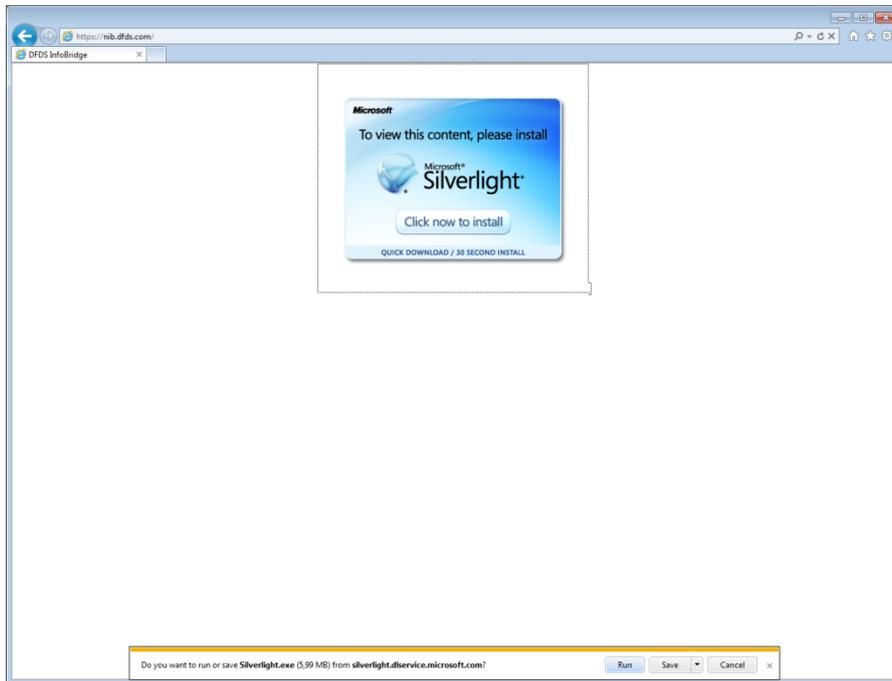

http://nib.dfds.com
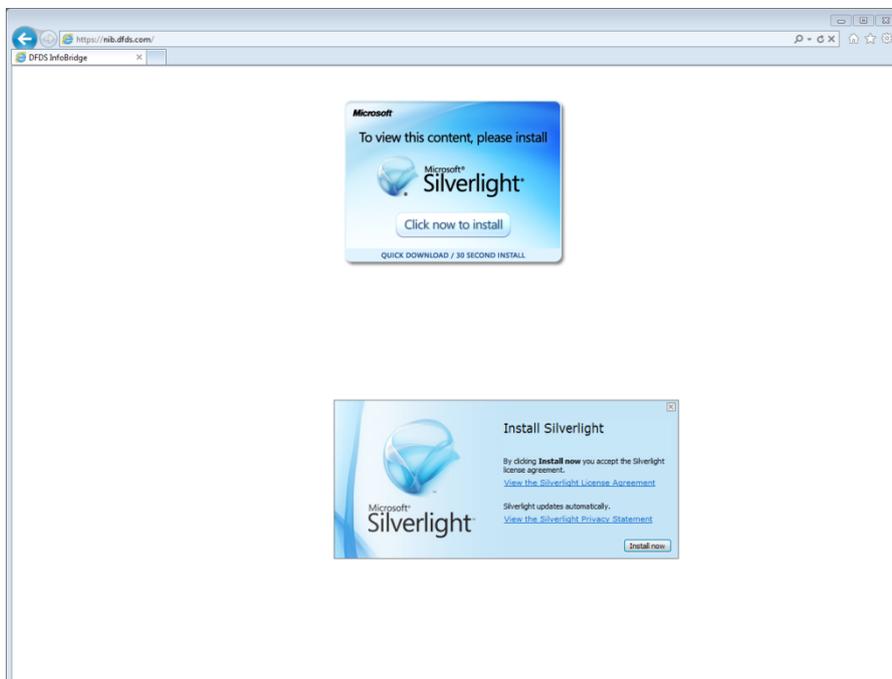

Normal Installation procedure

When not having the plugin installed you will see below screen asking you to install Microsoft Silverlight. Click the button "Click now to install"
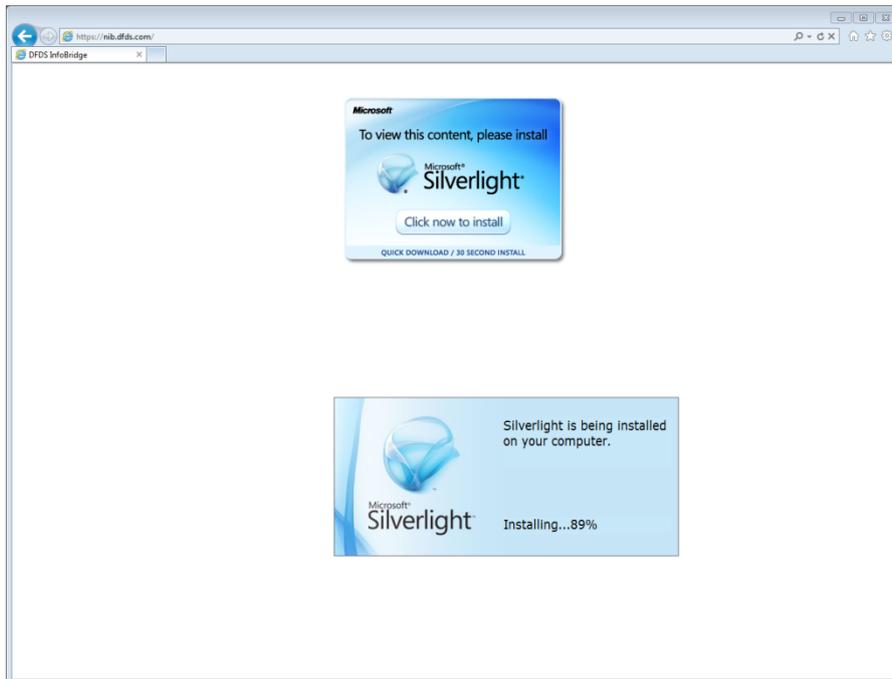

In Internet explorer you will need to confirm that you are downloading an exe file. Choose run to start the installation right after the download

When downloaded, the installation will start. You will need to verify that you are installing a program, click the "Install Now" button to start.

Installation will start and you will be able to see the progress

When installation has finished you should see the Login screen for Infobridge. Click Close to finish the installation and you are now ready to login.
If you do not see the login screen press F5 to refresh the webpage.

You are now able to use Infobridge.

Manual installation procedure

When visiting https://nib.dfds.com and you see nothing then try and install Silverlight manually. Please use below link to install Silverlight on your pc.
